

Palmer Electric Completes First Networked EV Charging Stations at U.S. Zoo

WINTER PARK, Fla., February 9, 2011 — Palmer Electric Company has completed its contract with the Central Florida Zoo & Botanical Gardens in partnership with Get Ready Central Florida for the installation of the first networked electric vehicle charging stations at a U.S. zoo. Under its scope of services, Palmer Electric installed two Coulomb Technologies Inc. dual voltage CT2100 electrical vehicle chargers at the Sanford, Fla.-based zoological venue.

As a partner of NovaCharge, Palmer Electric re-sells, installs and maintains Coulomb Technologies' electric vehicle charging stations.

Guest at the Zoo will be able to charge their vehicles for free and see the availability of these networked charging stations on their Internet Browser, their Smartphone, and on the GPS displays inside the new electric vehicles. Guests can also get a text or email when their car is fully charged.
